HOEGEMEYER

THE RIGHT SEED

NEWSLETTER

Quote of the Month

Thanksgiving is a typically American holiday... The lavish meal is a symbol of the fact that abundant consumption is the result and reward of production.

- Ayn Rand
US (Russian born) Novelist (1905-1982)

Yields on Website

We have been posting the yields of test plots on our website as we receive them in the office. Few results were sent in the middle of the month because rain delayed the harvest, but now they are starting to make their way to the office and onto the website. Many regions now have plot results to view.

To go directly to the "Yield Data" section, type in www.therightseed.com/yielddata07.shtml. Or you can go to www.therightseed.com and click the "Yield Data" tab on top of the page. Choose "2007 Yield Results," and the geographical area of interest on the multi-state map of the Hoegemeyer sales region.

All plots are viewable through PDF files. Adobe Acrobat Viewer, which is a common program installed on most computers, is required to view and/or print this information.

If necessary, you can use the following website to download Adobe Acrobat Reader 7.0:

<http://www.adobe.com/downloads/>

Post Harvest Meetings

Typically Post Harvest Meetings are in the first 3 weeks of November. And even with the rain in the middle of October, it looks like that will be the case.

With the delay in harvest, many of our DSMs are still harvesting test plots. Once we have all had a chance to wind harvest down, we will begin scheduling the meetings. Once scheduled, you should receive an invitation a week or two in advance.

Post-harvest meetings are a great opportunity to go over season results and product highlights. We will also do our best to answer any questions you may have.

Contact your DSM if you have any questions about the Post Harvest Meeting for your area.

Happy Thanksgiving

With harvest coming to an end and Thanksgiving just three weeks away, we at Hoegemeyer hope you will have time to enjoy family, and friends and the rewards of your labor.

HxXTRA-RR Not Available

This year **8193HxXTRA-RR** and **8669HxXTRA-RR** were to be grown in winter production. However, because seed stocks did not meet germination standards, we were not able to plant them in winter production as planned.

We were able to plant **8183HxXTRA-RR**. It has the same maturity as 8193HxXTRA-RR and is from the same genetic family as 9180Hx and 8180HxRR, two hybrids we carried last year.

If you are looking for the same genetic family as 8193HxXTRA-RR, we were able to plant **8192HxRR** (does not contain corn rootworm protection). Both are from the same genetic family as 590LL & 9191Hx.

If you are looking for the same genetic family as 8669HxXTRA-RR, we do have **9668HxXTRA** available. Without the 8669HxXTRA-RR, our supply of the 8781HxXTRA-RR, which has the same maturity, is already SOLD OUT.

Overall, we are out of 8669HxXTRA-RR, 8781HxXTRA-RR, and 8193HxXTRA-RR. The only Herculex XTRA/RR hybrid we still have available is **8183HxXTRA-RR**. We understand that this may be confusing. If you need more clarification, contact your DSM or contact one of us in the office.

Calendar

November

- Post Harvest Meetings

November 15

- 9% Early Pay Discount
- 2% APR Fixed Interest - Farm Plan

December 15

- 7% Early Pay Discount
- 3% APR Fixed Interest - Farm Plan

Seed Sizes Still Available for Each Hybrid **All hybrids treated with Poncho 250**
